維護保養方法

Pay attention to the rust on the washing tub

注意洗衣槽內的銹跡

The stainless basket is rustproof, but it may rust in the following cases. 雖然不銹鋼槽具有難以生銹的性質,但在以下場合還是有可能會生銹。

- ① The rust-inclined ironwork such as the barrette or the needle remains in the basket and touches the stainless steel inner wall. 髮夾或針等容易生銹的鐵製品留在槽內,與不銹鋼內壁接觸時。
- ② The water containing the impurities such as rust or iron power flows into the washing basket, and the impurities adhere to the stainless steel inner wall.

混有紅銹或鐵粉等雜質的水流進洗衣槽內,從而附著在不銹鋼內壁上。

When rusting of the basket occurs, use a sponge socked with liquid cleanser to remove the rust.

(See instruction label on liquid cleanser for details)

對於鐵銹,可用市面有售的乳狀清潔劑倒在海綿或布上,反復擦拭將其清除。

(詳細內容請參閱洗衣粉的使用說明)

• Please do not use metal brush to clean the washing basket lest it will damage or rust the washing basket. 請勿使用金屬剛清洗洗衣槽,以免損傷洗衣槽或使之生銹。

To avoid rust, the followings must be ensured.

爲防止生銹,必須注意以下要點

Avoid water and chlorine bleach in the basket for too long.
 嚴禁水或氯類漂白劑長時間停留在洗衣槽內。

Washing doesn't finish beyond the predefined time. 超過設定時間洗衣仍未結束。

Cause 原因

- The security switch acts as the laundry declines. Change automatically to the "Water-storage rinse" for the next rinsing. 由於衣物偏斜導致安全開闢動作的緣故。 下次沖洗將自動變爲儲水沖洗。
- The security switch acts as the laundry declines.
 Start spinning and agitating after rinsing, and the spinning will go on after clearing the laundry declination.
 由於衣物編科導致安全開闢動作的緣故。
 沖洗後進行脫水和攪拌運轉,消除衣物編科後還會繼續脫水。
- It is because the sensor control the spinning times to improve the efficiency of spinning.
 這是為提高脫水效率,由於傳感器控制脫水次數的緣故。
- When the power supply is cut off, the basket stops completely, and the lid lock will be unlocked.
 當斷開電源,脫水槽完全停止下來後,機蓋銷定將被解除。
- The power supply switch won't work until the basket stops the inertial rotation.

直到脫水槽的慣性旋轉停止後,電源開關才會起作用。

 This is to prevent overflow.
 The water drainage pump starts automatically when the preset alarming level is exceeded.
 這是爲了防止溢水。

當超過設定的預警水位時,排水泵自動啟動。

 This is because the water in the washer is going to to be drained off, resulting in the entry of air into the chamber of the water drainage pump.

這是因爲洗衣機中的水即將排完,使空氣進入了排水泵的腔體內。

- The setting of the water level is based on the extent of the washings in the washing machine emerging out the water surface and the ability of the clothes roll up and down in the washing machine. 洗衣機以衣物稍微露出水面及由攪拌翼攪拌衣物可以上下翻動的能力爲依據設定水位。
- Since the clothes of chemical fiber is comparatively light, the water level is set accordingly low.

由於化學纖維、聚脂纖維等衣物較輕,因此水位設定也較低。

- The water level will rise during washing if the clothes being washed have been drenched or water has been charged in advance. 洗衣已濕透的衣物或洗衣槽中事先放了水時,洗衣時水位會較高。
- If there is much floss in "Normal" program, the efficiency of the floss filtering can be improved by increasing the water consumption, extending washing time and setting rinse for more times. 標準程序中出現較多棉絮時,可用提高水位,延長洗衣時間和設定多次沖洗等方法提高過濾棉絮的效率。
- The washing time may exceed predefined time in case of extremely small amount of charged water. 供水量很少的情況下,洗衣時間有可能超過設定時間。

Case	現象

About the drying time 關於乾燥 時間

Spinning doesn't finish beyond the predefined time. 超過設定時間乾燥仍未結束。

About the air jet processing 關於風乾 程度

It is not dried. 未乾。

The power supply switch won't work right away when transferred from switched-off to switched on. 電源開闢由"斷開"轉換到"接通"

時,可能不會立即起作用。

About the power switch 關於電源

開闊

The indicating LED won't light right away when the power supply switch is switched on. 電源開闢"接通"後,指示燈不會立即點亮。

Six processes LED light after the power supply switch is switched off. 電源開闢"斷開"後,6 個程序指示燈點亮。

It buzzes after the power supply switch is switched off. 電源開闢"斷開"後,發出"嗡嗡" 的聲音。

About the lid lock 關於機蓋鎖定

The lid can't be opened even when the Pause button is pressed during the spinning.

脫水過程中,即使按下暫停按鈕也無 法立即打開機蓋。

About the flavor

Odor of insulating varnish smells in the beginning of use. 初期使用時有氣味。

flavor 關於氣味 關於氣味 脫水時有氣味。

Others 其他

Pulsator rotates but does not display the washings load and water quantity after pressing the Start button. 按下啟動按鈕後、攪拌翼轉動但沒有 顯示洗衣量和水位。

第一次使用時,有水從排水管中流出。

Water comes out from the water drainage hose during first time usage.

No reaction after starting. 啟動後無動作。

There are detergent residue remained on the detergent dispenser. 洗衣粉殘留在洗衣粉加入盤。

Cause 原因

- The predefined time is the time for drying spinning, and the actual operation time need to plus the clothes dressing and oblique correction time, which, in aggregation, will be longer than the predefined time by 5~30 minutes.
 設定時間是進行乾燥脫水的時間,實際運轉時間還要加上理順衣物和糾正衣物偏斜的時間,大概比設定時間延長5至30分鐘。
- Depending on the quantities & types of laundries, air temperature & moisture, seasons and environment, the completion time may differ.
 由衣物的數量·種類,氣溫·濕度,季節和環境決定,完成時間會變化。
- The power supply switch doesn't work from the cutoff of the switch to the extinguishment of the mode LED. If the power supply is to be switched on again, please press the switch after the LED extinguish. 從切斷電源開闢到程序指示燈熄滅爲止,電源開闢不起作用。若要再次接通電源,請待指示燈熄滅後再按下電源開闢。
- The washing machine sound "Hoola, hoola" after the power supply is switched on. About 1 second later, the LED lights. (since the software switch is used, the microcomputer need time for internal treatment.) 接通電源開闢後,於去機發出"嗶嗶"的聲音,大約1 秒鐘後指示燈點亮。 (由於使用軟件開闢,而微電腦進行內部處理需要時間)
- When switching off the power supply with clutch motor in spinning status, the clutch motor returns to washing status and the mode LED lights. 離合器電機在脱水狀態下,切斷電源開關時,離合器電機回復至洗衣 狀態,同時程序指示燈點亮。
- The operation stops after the power supply is switched off during the spinning, and it buzzes. That's the sound generated during switching modes by clutch.

 股水過程中切斷電源開關後,運轉停止並發出"嗡嗡"聲。這是離合器進行模式切換時的聲音。
- After the power supply is cut off, the spinning basket stops completely, and the lid lock will be unlocked.
 當斷開電源,脫水槽完全停止後,機蓋鎖定將被解除。
- This is the odor of the insulating varnish of the motor in the beginning of use. The odor exists only at the early stage, and will dissappear about period of time after put into application. 這是初期使用時從電機中的絕緣漆產生的氣味。該異味僅存在於初期,使用約一段時間後氣味會自動消失。
- Adverse drainage condition or excessive foams (due to excessive detergent) may cause too much spinning load and make the smell even more intensive. 排水條件惠劣或泡沫過多(因放入過多洗衣劑等)會造成脫水負荷過 大,使得氣味更加強烈。
- Water from tests conducted by the manufacturer remains in the drainage hose.
 這是工廠做性能測試時剩下的水。
- This is because the sensor cannot successfully detect due to the foreign interference. At that time, the power supply can be cut off and the washing machine need to be restarted. 這是由於外來干擾的影響而導致傳感器無法正確檢測造成的。此時可 切斷電源,然後再次啟動。
- This is because the washing machine is waiting for detergent or is switching the clutch.
 這是由於洗衣機在等待放入洗衣劑或正在進行切換離合器。
- When the body is excessive oblique, the detergent may remain on the dispenser. Please check the obliquity of the body.

 查機體過度傾斜時,洗衣粉可能會殘留在洗衣粉加入盤。請檢查機體 的傾斜程度。
